EDUCATIONAL DETAILS

Bachelor of Engineering in Computer Engineering

June 2022-June 2026

Government College of Engineering and Research,Avasari(SPPU affiliated)

Higher Secondary Certificate(HSC)

2021-2022

Shree Chhatrapati Shivaji Mahavidyalaya Shrigonda,Ahilyanagar

65.67%

Secondary School Certificate(SSC)

2019-2020

Janata Vidyalaya Kashti, Shrigonda ,Ahilyanagar

87.20%

TECHNICAL SKILLS

Programming Languages : Java ,Python ,JavaScript

Data Engineering:PySpark ,Apache Spark ,Spark SQL ,ETL Pipeline Development ,Medallion Architecture ,Data Quality & Validation ,Pandas,Airflow,Delta Lake,Hadoop (Basic)

cloud:Azure Databricks (Basic) ,Azure Data Factory (Basic) ,Azure Data Lake Storage Gen2 (Basic)

Web development:Express.js ,React.js

Databases:MySQL , MongoDB

Tools:Git,GitHub

Computer Engineering Fundamentals:OOP,DBMS,Computer Networks,DSA,Operating Systems

CERTIFICATION

Python 3.4.3 -Spoken Tutorial Project ,IIT Bombay

PROJECTS

Healthcare Data Engineering Pipeline

Technologies: Python, PySpark, Apache Spark, Delta Lake, SQL, Apache Airflow

- Designed and implemented a Bronze-Silver-Gold medallion architecture to ingest, transform, and curate healthcare data from multiple sources
- Developed PySpark-based ETL pipelines for data cleansing, validation, schema standardization, and transformation into analytics-ready datasets.
- Implemented Slowly Changing Dimension (SCD) Type 2 logic, duplicate detection, and data quality checks to maintain historical accuracy and data reliability.
- Modeled dimensional data structures including fact and dimension tables to support reporting and analytical workloads.
- Developed Apache Airflow workflows to orchestrate end-to-end data pipeline execution with automated task dependencies and monitoring.

IMDB Medallion Data Pipeline

Technologies: Python, PySpark, Apache Airflow, Google Cloud Storage, BigQuery, Dataproc, Cloud Composer, Looker

Build a cloud-native data pipeline on Google Cloud Platform to process IMDB Movies,TV Shows and cast data into analytics-ready dataset for business reporting and interactive dashboard

- Designed an end-to-end Medallion Architecture using Google Cloud Storage, BigQuery, Dataproc, and Cloud Composer to automate large-scale ETL processing.
- Developed Python-based ingestion services to extract IMDb data from RapidAPI and store raw datasets in Google Cloud Storage for reliable downstream processing.
- Orchestrated pipeline execution using Apache Airflow (Cloud Composer) with dependency management, retry handling, and automated workflow execution.
- Built distributed PySpark transformation pipelines on Dataproc to perform schema validation, data cleansing, standardization, and business transformations before loading curated analytical tables into BigQuery.
- Designed idempotent ETL workflows and analytics-ready Gold datasets consumed by Looker dashboards for movie rankings, rating analysis, and cast insights.
- Delivered a scalable cloud-native analytics platform that automated data ingestion, transformation, and reporting with minimal manual intervention.

Olympic Games Analytics Platform

Technologies: Python, PySpark, Apache Spark, Spark SQL, Delta Lake, Data Warehousing

Built an Olympic Analytics Platform to transform raw Tokyo Olympic datasets into analytics-ready warehouse tables supporting medal analysis, country performance, gender equality, and executive KPI reporting.

- Designed a Bronze-Silver-Gold Medallion Architecture to organize raw, validated, and curated Olympic datasets for scalable data processing.
- Developed distributed PySpark ETL pipelines to ingest athlete, coach, team, medal, and participation datasets while performing schema validation, standardization, duplicate removal, and data quality checks.
- Designed a Galaxy Schema with Fact and Dimension tables using surrogate keys generated through Spark Window Functions to support enterprise analytical workloads.
- Generated KPI datasets for country performance, gender equality, coach coverage, and discipline competitiveness using Spark SQL analytical transformations.
- Implemented an automated data quality framework performing referential integrity validation, duplicate detection, row reconciliation, and business rule verification across Gold layer datasets.
- Delivered trusted analytical datasets and KPI reports that enabled reliable reporting while significantly reducing manual data preparation.

Real-Time Chat and Community Platform

Technologies: React.js, Node.js, Express.js, MongoDB, Socket.io, WebRTC, JWT, Cloudinary

- Implemented secure user authentication using JWT tokens and bcrypt password hashing for user access and Session Management.
- Built real-time messaging features using Socket.io including online presence tracking, typing indicators, and message delivery and seen receipts.
- Integrated peer-to-peer audio and video calling using WebRTC with Socket.io signaling.
- Designed RESTful APIs using MVC architecture and MongoDB models for efficient data storage and retrieval.
- Enabled media sharing through Cloudinary integration supporting image, audio, and video uploads.

SCHOLARSHIPS AND EXTRACURRICULAR ACTIVITIES

FoC Scholarship Recipient(First Year - Last Year)

Selected for FOC scholarship based on academic performance.

As part of the FoC program, participated in community service activities including awareness campaigns and cleanliness drives.

Contributed to social outreach initiatives aimed at community development.

INTERPERSONAL SKILLS

Adaptability ,Collaboration ,Communication
